Introduction:

Introduction of the Project Online E-commerce System: The "Online E-commerce System" has been developed to override the problems prevailing in the practicing manual system. This software is supported to eliminate and in some cases reduce the hardships faced by this existing system. Moreover this system is designed for the particular need of the company to carry out operations in a smooth and effective manner. The application is reduced as much as possible to avoid errors while entering the data. It also provides error message while entering invalid data. No formal knowledge is needed for the user to use this system. Thus by this all it proves it is user-friendly. Online E-commerce System, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather than to concentrate on the record keeping. Thus it will help organization in better utilization of resources. Every organization, whether big or small, has challenges to overcome and managing the information of Item Category, Men, Woman, Child, Delivery Address, Order. Every Online E-commerce System has different Food needs, therefore we design exclusive employee management systems that are adapted to your managerial requirements. This is designed to assist in strategic planning, and will help you ensure that your organization is equipped with the right level of information and details for your future goals. Also, for those busy executive who are always on the go, our systems come with remote access features, which will allow you to manage your workforce anytime, at all times. These systems will ultimately allow you to better manage resources.

Abstract of the Project Online E-commerce System:-

Abstract of the Project Online E-commerce System The purpose of Online E-commerce System is to automate the existing manual system by the help of computerized equipment's and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. The required software and hardware are easily available and easy to work with. Online E-commerce System, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus it will help organization in better utilization of resources. The organization can maintain computerized records without redundant entries. That means that one need not be distracted by information that is not relevant, while being able to reach the information. The aim is to automate its existing manual system by the help of computerized equipment's and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. Basically the project describes how to manage for good performance and better services for the clients.

Objective of the Project Online E-commerce System:-

The main objective of the Project on Online E-commerce System is to manage the details of Clothes, Item Category, Shopping Cart, Customer, Order. It manages all the information about Clothes, Delivery Address, Order. The project is totally built at administrative end and thus only the administrator is guaranteed the access. The purpose of the project is to build an application program to reduce the manual work for managing the Clothes, Item Category, Delivery Address, and Shopping Cart. It tracks all the details about the Shopping Cart, Customer, Order

Scope of the project Online E-commerce System:-

It may help collecting perfect management in details. In a very short time, the collection will be obvious, simple and sensible. It will help a person to know the management of passed year perfectly and vividly. It also helps in current all works relative to Online E-commerce System. It will be also reduced the cost of collecting the management & collection procedure will go on smoothly. Our project aims at Business process automation, i.e. we have tried to computerize various processes of Online E-commerce System.

- In computer system the person has to fill the various forms & number of copies of the forms can be easily generated at a time.
- In computer system, it is not necessary to create the manifest but we can directly print it, which saves our time.

Functionalities Provide by Online E-commerce System are as follows:

- Product and Component based
- Creating & Changing Issues at ease
 - Query Issue List to any depth
 - Reporting & Charting in more comprehensive way
- User Accounts to control the access and maintain security
 - Simple Status & Resolutions
 - Multi-level Priorities & Severities.
- Targets & Milestones for guiding the programmers
- Attachments & Additional Comments for more information
 - Robust database back-end
- Various level of reports available with a lot of filter criteria's
 - It contain better storage capacity.
 - Accuracy in work.
- Easy & fast retrieval of information.

Project Requirement:

- Hardware Requirements:

Processor required :- intel i3 or above

RAM required :- 2GB.

- Tools & Technologies Used:

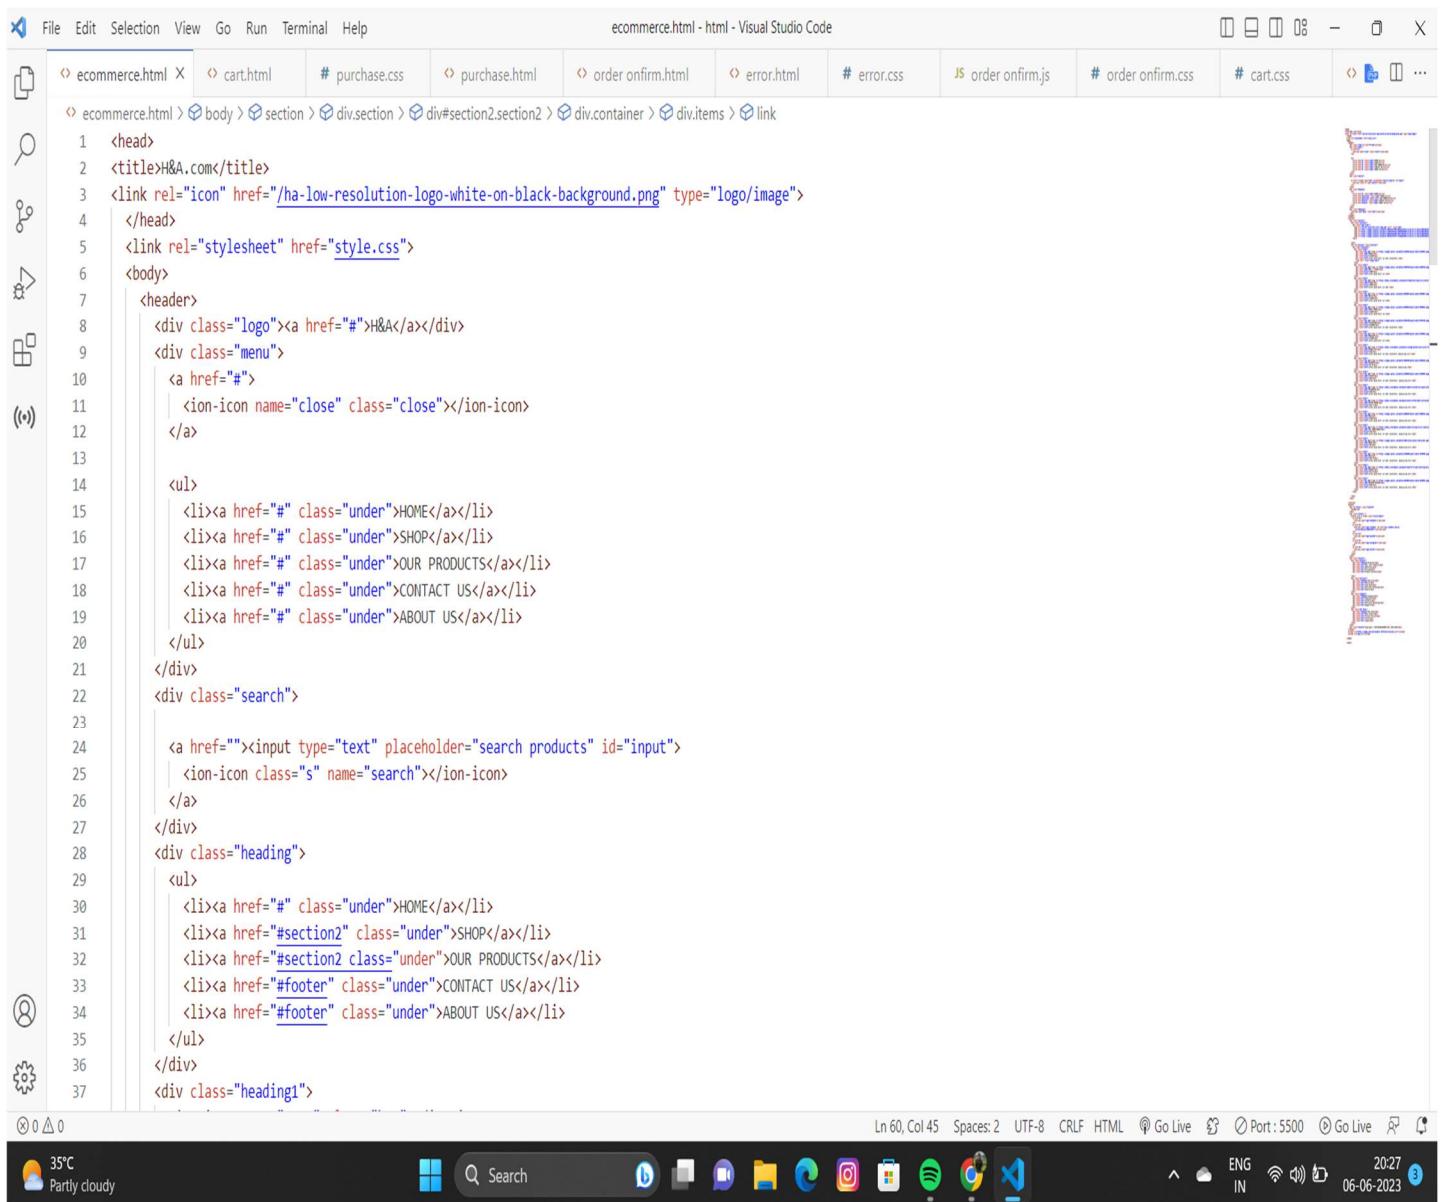

Tools (IDE): Visual Studio 2022

Code Behind: HTML, CSS ,Javascript

```

Javascript:-

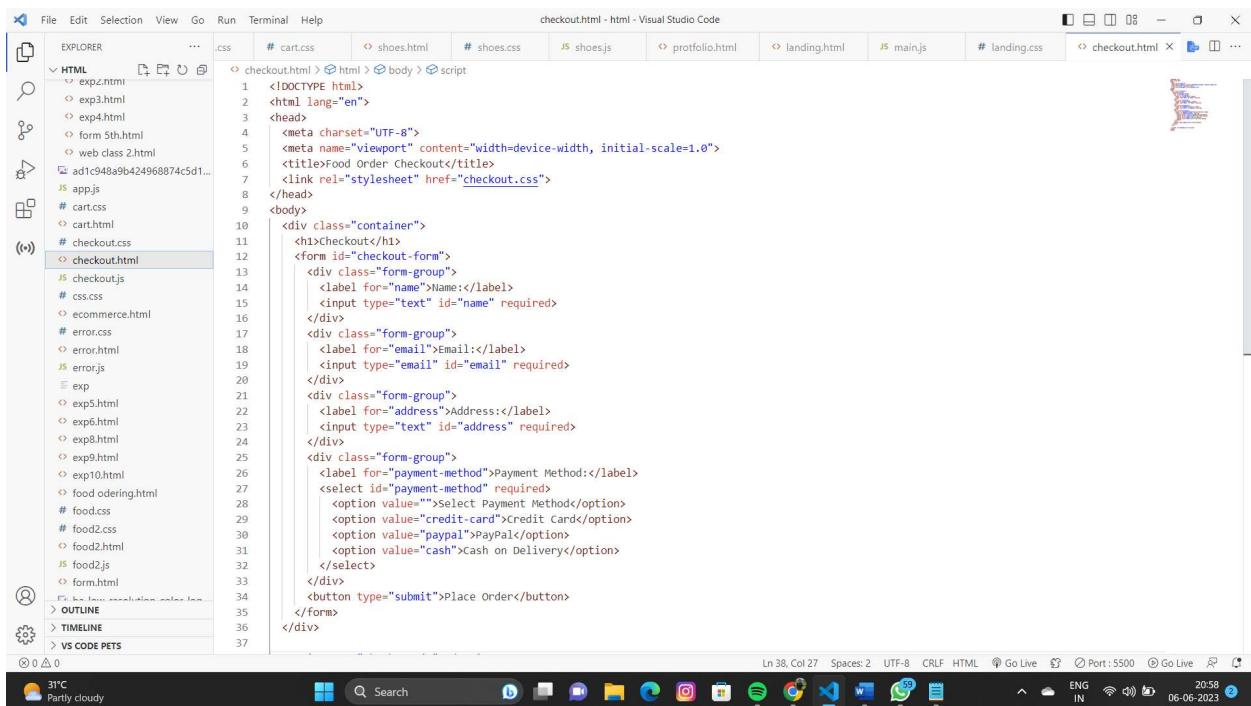

The screenshot shows the Visual Studio Code interface with the 'shoes.js' file open. The code implements a 3D movement animation for a shoe card. It uses CSS selectors to target elements like '.card', '.container', '.title', '.sneaker img', '.purchase', '.info h3', and '.sizes'. The script adds event listeners for 'mousemove' and 'mouseleave' to calculate new transform values based on the mouse position relative to the window's inner width and height. It then applies these transforms using CSS's rotateY and rotateX properties. The code also includes a 'Popout' section where the entire card is moved to a new position. The 'outline' and 'timeline' sections are visible on the left, and the status bar at the bottom shows the file path, line count (Ln 36), column count (Col 4), and other system information.

```
shoes.js > ...
1 //Movement Animation to happen
2 const card = document.querySelector(".card");
3 const container = document.querySelector(".container");
4 //Items
5 const title = document.querySelector(".title");
6 const sneaker = document.querySelector(".sneaker img");
7 const purchase = document.querySelector(".purchase");
8 const description = document.querySelector(".info h3");
9 const sizes = document.querySelector(".sizes");
10 //Moving Animation Event
11 container.addEventListener("mousemove", (e) => {
12     let xAxis = (window.innerWidth / 2 - e.pageX) / 25;
13     let yAxis = (window.innerHeight / 2 - e.pageY) / 25;
14     card.style.transform = `rotateY(${xAxis}deg) rotateX(${yAxis}deg)`;
15 });
16 //Animate In
17 container.addEventListener("mouseenter", (e) => {
18     card.style.transition = "none";
19     //Popout
20     title.style.transform = "translateZ(150px)";
21     sneaker.style.transform = "translateZ(200px) rotateZ(-25deg)";
22     description.style.transform = "translateZ(125px)";
23     sizes.style.transform = "translateZ(100px)";
24     purchase.style.transform = "translateZ(75px)";
25 });
26 //Animate Out
27 container.addEventListener("mouseleave", (e) => {
28     card.style.transition = "all 0.5s ease";
29     card.style.transform = `rotateY(0deg) rotateX(0deg)`;
30     //Popback
31     title.style.transform = "translateZ(0px)";
32     sneaker.style.transform = "translateZ(0px) rotateZ(0deg)";
33     description.style.transform = "translateZ(0px)";
34     sizes.style.transform = "translateZ(0px)";
35     purchase.style.transform = "translateZ(0px)";
36 });

Javascript:-

The screenshot shows the Visual Studio Code interface with the following details:

- File Explorer:** On the left, it lists various files and folders. The **checkout.js** file is selected and highlighted.
- Code Editor:** The main area displays the **checkout.js** code. The code is a JavaScript function that handles a form submission. It checks if all required fields are filled (name, email, address, payment method). If any field is missing, it alerts the user to fill in all fields. Otherwise, it alerts "Order placed successfully!".
- Bottom Status Bar:** Shows the current weather (31°C, Partly cloudy), system icons, and the date/time (06-06-2023, 21:00).

```
checkout.js > ...
1 document.getElementById('checkout-form').addEventListener('submit', function(event) {
2     event.preventDefault();
3
4     // Get form values
5     var name = document.getElementById('name').value;
6     var email = document.getElementById('email').value;
7     var address = document.getElementById('address').value;
8     var paymentMethod = document.getElementById('payment-method').value;
9
10    // Perform validation
11    if (!name || !email || !address || !paymentMethod) {
12        alert('Please fill in all fields.');
13        return;
14    }
15
16    // Perform further processing or submit the form
17    // You can use AJAX to send the form data to a server-side script for processing
18    alert('Order placed successfully!');
19 });
20
```
